# Innovative Cleaning Concepts

## Innovative Clean

### Experience for Success

Dussmann Service has been operating successful industrial cleaning services for nearly 50 years. Our years of experience, our service orientation and our services, tailored to the individual needs of each client are the recipe of our success.

### High Standards for New Solutions

The cleaning industry faces increasingly challenging requirements in terms of ecology and economy. Modern professional cleaning must also take sustainability into consideration. In addition to the individual requirements of our clients, we focus on the innovative green-clean concepts with the objective of environmentally compatible cleaning and managing resources. This approach leads to constant development of innovative cleaning solutions.

### Professional Competence for Innovation

In cooperation with selected suppliers, experienced professionals from the Dussmann Service cleaning division have developed numerous service innovations.

From cleaning concepts to cleaning equipment and products.

### Innovative Cleaning Concepts

- For the social&care sector, we have prepared a manual for cleaning in care facilities. It helps to establish efficient processes and provides clear specifications for individual services.
- Our floor care system protects not only industrial flooring through optimum surfacing but also the environment by using less cleaning chemicals.
- For clean-room cleaning, we have our own competence center which provides initial and further training. We also develop practice-oriented equipment here e.g. the clean-room sword
- In health & fitness centers, the use of easily maneuverable machines ensures an innovative combination of individual components for holistic cleaning.
- We have modified techniques for removing graffiti to be less aggressive and more effective to enable a more flexible approach.

# Innovative Cleaning Products Cleaning Technology

## Innovative Cleaning Technology

- For deployment in the smallest spaces, we have developed a shop system, that needs no space at all:  
space-saving, mobile and flexible.
- Our silver mop is the optimum addition to the shop-system. An anti-bacterial silver layer hinders the growth of microbes and bacteria.
- Our one-step mopping procedure makes changing the mop superfluous. The result: improved ergonomics, time

savings and a reduction of cleaning product consumption by more than 45%.

- Our Mobile Cleaning Device is designed for confined spaces – a flexible cleaning system that has everything necessary on board. The innovative cleaning case can be carried length-wise or width-wise depending on the dimensions of the corridor.
- Our Protect Cleaning Trolley ensures that all of the cleaning products in use are safely stored. It consists of modules and can be adapted to answer

varying requirements.

## Innovative Cleaning Products

Our cleaning products carry our own label. Their deployment offers several advantages:

- The Dussmann Service label facilitates quality management and quality assurance
- Product innovations do not lead to new product names for personnel
- Color and number codes ensure proper use
- The same products are used on every site .
- All products fulfill the norms prescribed by legislation
- All surfactants contained are completely biodegradable .

The variety of our own cleaning products ranges from universal and deep cleaning agents for all types of surfaces to intensive, active and care products. It includes cleaning products for sanitary areas and carpet cleaning but also machine cleaners, micro fluids with anti-soiling factor and specialist products for specific tasks.

# Facility Services for Every Need

## A Holistic Approach for Synergies

Dussmann Service provides innovative, individual solutions, not only for cleaning services. Our portfolio includes all facility services for your real estate: from planning to the provision of single services to entire holistic service concepts.
